## Smart Thermostat

Winning Guide RDS120

[usa.siemens.com/smart-thermostat](http://usa.siemens.com/smart-thermostat)

### Key arguments

#### Ease of use

- Intuitive navigation. Display reduced to the essentials. No user manual required
- End user app: Key indicators at a glance – indoor air quality and humidity, Green Leaf, scheduler setup, energy consumption report

#### Higher energy efficiency

- Built-in presence detector switches from economy mode to comfort in case of occupancy
- One tap on the red leaf turns it into a Green Leaf to ensure energy-optimized operation
- Energy consumption report (HVAC) raises awareness among users about reducing energy costs

#### Improved efficiency for installers

- Navigation wizard for fast and guided commissioning
- Two-steps independent commissioning for new building without tenant
- No gateway required; direct connection to Wi-Fi compatible router
- Support Wi-Fi Protected Setup (WPS)

#### Ready for future needs

- Automatic online software upgrade (inc. device and mobile app)

#### Health and comfort

- Indoor air quality monitoring via built-in sensor
- Humidity and temperature monitoring and control via built-in sensor

## Questions and answers

What are the benefits of the Smart Thermostat?

**Ease of use:** Intuitive navigation, display reduced to the essentials  
**Fast commissioning:** Wizard function (step-by-step guide), no gateway required, direct connection to Wi-Fi router  
**Healthy indoor conditions:** Indoor air quality and humidity monitoring via built-in sensor, Green Leaf

When is the Smart Thermostat used?

The Smart Thermostat can be used in replacement business as well as in new construction. It can be commissioned before buildings are rented thanks the 2-step commissioning concept

Why is a Smart Thermostat app essential?

With the Smart Thermostat app end users can control and monitor the temperature from anywhere at any time. Different set points can be set on the time scheduler for a perfect room climate 24/7. Different modes (e.g. away, home) can be changed with one click

Why is high energy efficiency important?

Green buildings have a higher rental value and lower energy costs

What sensors are integrated in the Smart Thermostat?

Indoor air quality, humidity, temperature, presence detector (PIR), proximity, light (for optimum readability of the display)
